Sunitwiz

Education

B.Tech. in Electrical Engineering

Indian Institute of Technology (IIT), Kharagpur

Micro-Specialization in Artificial Intelligence and Applications

CGPA: 9.13/10.0

2018-2022

CGPA: 9.81/10.0

Work Experience

SuperAGI

Software Development Engineer 2

Bangalore, India

March 2025 – Present

- Introduced AI-powered **Voice agents** leveraging LLM-based intent detection, dynamic knowledge base integration, meeting booking via custom API integrations, and post-call analysis for lead qualification and in-call data extraction. Integrated agents with existing Twilio and Plivo numbers using Elastic SIP Trunking, enabling up to 20 concurrent AI-driven agent calls.
- Built a **distributed dialer** over Twilio and Plivo supporting Power, Parallel, and AI Voice Agent modes with TwiML-based call orchestration, Answering Machine Detection, and conference transfers; implemented Redis-based distributed locking and goroutine fan-out with an Asynq worker pipeline to scale campaign execution from 400 to 2,000+ daily calls (5x throughput).
- Built a **Conversational Intelligence** pipeline integrating Deepgram STT (Nova-3 for recordings and Nova-2 for real-time streaming) with multichannel speaker diarization and multi-language transcription, processing Twilio and Plivo call audio into speaker-attributed transcripts and enabling AI-driven call analysis with 95%+ transcription accuracy.
- Automated **Twilio/Plivo** compliance workflows using an event-driven microservices architecture, streamlining Regulatory Bundle, KYC, and 10DLC brand/campaign registrations for phone number activation across 60+ countries. Built webhook-driven approval orchestration, reducing provisioning time from 3 weeks to 1 week.
- Designed **OpenSearch indexing** architecture for Conversation Intelligence by replacing per-workspace indices with a shared environment-level index using 150 typed field slots (string, number, boolean), mapped via a PostgreSQL lookup table with Redis-cached resolution, eliminating cluster instability and significantly reducing infrastructure costs.

Honeywell International Inc.

Software Development Engineer 2

Bangalore, India

July 2022 – November 2024

- Built scalable **IAM microservices** for Honeywell Forge using NodeJS, implementing authentication and authorization workflows with 95%+ unit test coverage.
- Implemented **Prometheus monitoring** in the login deployment pipeline to enable real-time service metrics and production observability.
- Improved **database performance** by instrumenting login, policy access, and query latency metrics, identifying slow queries and optimizing them to increase query efficiency by 40%; resolved 50+ security issues identified via BlackduckHub and Coverity while improving code quality coverage to 95% through SonarQube.
- Contributed to **Agile delivery** through sprint planning, stand-ups, and retrospectives, consistently delivering 96% of sprint commitments.

Honeywell International Inc.

Machine Learning Engineer

Bangalore, India

May 2021 - July 2021

- Analyzed real customer HVAC data from **AHUs** using multivariate time series analysis and developed a Vector Auto-Regressive (VAR) model to predict demand responses to setpoint changes with 90%+ accuracy, identifying 15+ zonal plants for optimization and influencing energy management strategies for 10+ clients.

Projects

- Blue Yonder's** Next-Gen Optimized Delivery Ecosystem Event
Inter IIT Tech Meet 10.0 Low Prep Event
 - Designed a 3D drone deployment solution leveraging **NSGA-II** for **adaptive** re-planning around no-fly zones and multiple warehouses.
 - Streamlined demand fulfillment, reducing total costs (energy and maintenance) by **25%** while minimizing drone usage by **20%**.

Technical Skills

- Programming Languages:** Golang, Node.js, Python, C# (.NET), PostgreSQL, C/C++, Java, Ruby on Rails
- Libraries/Frameworks:** TensorFlow, Keras, Generative AI, AWS SDK (S3, Lambda)
- Cloud/Tools:** Microsoft Azure, Docker, Kubernetes, Git, Bitbucket, Bamboo, Kibana, Grafana, PostgreSQL, MySQL

Awards and Achievements

- 2022: Secured Global Rank 36 in **Credit Suisse** Global Coding Challenge.
- 2021: Achieved Global Rank 445 in **Google Kickstart** Round F and Rank 1497 (top 4%) in Facebook Hackercup Round 2.
- 2021: Secured 45th Rank in **Ode2Code** by Xiaomi India and advanced to the finals of JUMPSTART by Publicis Sapient.
- 2019: Ranked under top 7% in **IIT Kharagpur** and successfully transferred to the Electrical Engineering department.
- 2018: Secured All India Rank 2664 in **JEE Advanced** among 1.3 million candidates.
